DISCHARGE SUMMARY

TREATMENT GIVEN : Patient was treated with
IV Fluids (NS, RL)
Inj. Zocef 750 mg IV
Inj. Pantocid 40 mg IV
Inj. Emeset 8 mg IV
Inj. Paracetamol 1 gm IV
Inj. Clexane 40 mg S/C
Inj. Tramazac 50 mg IM
Inj. 3% Saline IV
Inj. Insugen R S/C
Inj. Potassium Chloride IV
Epidural Infusion
Tab. Zocef 500 mg
Tab. Dolo 650 mg
Tab. Pantocid 40 mg
Tab. A to Z
Tab. Glimda MV2
Tab. Thyronorm 75 mcg
Tab. Telday 40 mg
Tab. Hyponat 15 mg
Tab. Anxit 0.25 mg
G Norm Sachet
Dulcolax Suppository
Physiotherapy
1 unit of 'A' positive Concentrative of Human Red Blood Cells transfused on 18th and 19th December 2023

DISCUSSION : Mrs. Lakshmi Srinivas T, aged 64 years presented with clinical history, examination findings and investigation suggestive of bilateral osteoarthritis knee (Left > Right). Patient and patient's attendants were counselled regarding the condition, need for surgery, risks, complications, expectations, side effects and postoperative care. Preoperative investigations were done and medical clearance was obtained by the Physician (Dr. Girish Krishnamurthy). She underwent Total Knee Replacement [Left] under Spinal and Epidural Anaesthesia + Sedation. Postoperatively, she was shifted to ICU for observation and close monitoring. Her ICU stay was uneventful and shifted to the ward on 1st postoperative day. During the course, investigations revealed hyponatremia, hypokalemia and anaemia for which she was treated with 3% Saline, Tab. Hyponat, Inj. KCL and 2 units of PRBCs. She was also treated with IV antibiotic, antacid, analgesic, anti-inflammatory, physiotherapy and other supportive care. She recovered well and is being discharged in a stable condition with the following advice. She recovered well, walks with brace with walker and has 40° - 50° knee bending, able to sit on chair and commode.

CONDITION ON DISCHARGE : Satisfactory. Good level of post operative analgesia.
